

College of Coastal Georgia BS in Health Science Program Outcomes

End of Program Student Learning Outcomes:

1. Integrate health science knowledge and skills with the arts and sciences to help self, individuals, families, and communities progress toward fulfillment of human potential.
2. Generate evidence-based judgements from health science and knowledge from other disciplines in the delivery of competent, safe, compassionate and holistic quality care to patients and clients across the lifespan in a variety of settings.
3. Promote health and disease prevention programming by providing strategies and services to individuals, families, and communities.
4. Acquire and develop measurement, evaluation and data dissemination skills that will serve the individual, our community and our discipline.
5. Exhibit professional behaviors that reflect integrity, altruism, autonomy, social justice, respect for diversity and human dignity, commitment to safe, quality, evidence-based practice, and caring for diverse individuals, families, and communities while adhering to strict confidentiality policies.
6. Participate in regular evaluative program assessment for the purpose improving health promotion programming and delivery.
7. Provide leadership in improving care and oversight of health science practice while advocating for equitable health care as a member of the profession.
8. Demonstrate scholarship that contributes to the development of health promotion science and practice by identifying questions for inquiry, refereeing published research, and disseminating new knowledge.
